

Connect. Build. Deliver.

LeverageTek IT Solutions is a recognized supplier of Information Technology Professional Services. With hundreds of successful engagements to our credit with many of Canada's leading public and private sector organizations, we are the experts in identifying and deploying technology-specific talent and consulting expertise.

Services

Contract IT/IM Staffing. LeverageTek's contract staffing services are focused on Information Systems Applications, IT Infrastructure, and Information Management. We are committed to understanding our customer's unique working environment before presenting the right individual, and not just the right resume. We have simplified the process of acquiring and integrating a new team member and are well known for maintaining an industry leading brand of customer service from the beginning of engagement to the end. Whether your needs include acquiring a technology-specific expert or replacing a key internal resource, LeverageTek will bridge the gap by providing you with a proven IT professional in a timely and efficient manner.

Permanent Placement Staffing. LeverageTek understands the importance of hiring well-rounded individuals who are technically sound and dedicated to serving your team on a permanent full-time basis. We understand that our customers often seek much more in a candidate than technical skills. They require specific soft skills that will fit in well with their team and mesh with their corporation's unique culture. With our proven screening practices and our vast network of professionals, LeverageTek will find your organization the permanent team member it is seeking.

Application Solutions. To virtually all organizations, large or small, information systems are the vital component to serving internal and external business needs. Today's refined systems provide countless viable options for organizations focused on realizing the potential of their business productivity and in most cases, their profitability. With all the choices available, and with the vast potential each choice can bring, CIOs will inevitably face the difficult task of maximizing the productivity of their choices to increase the return on each investment made.

LeverageTek's Solutions Experts are industry tested professionals with the knowledge and experience to either lead a new implementation or maximize the productivity of an existing system or product. Aside from specialized experience in the architecture, design and development of .NET-based systems, LeverageTek's solution capability is focused on Microsoft products and technologies, including Microsoft SharePoint Portal Server, CRM, and BizTalk.
